

Tips

- Double-Clicking is a much faster way to add struts, try using it as much as possible
- Remember all rotations will Focus on the selected ball (even mouse rotations)
- Be careful not to move your mouse while double-clicking, it will register as a mouse drag and automatically re-Focus on the selected ball (this can be disorienting)
- There are only 500 balls which should be plenty, but you never know
- If you lose your orientation, you can always use the Reset button
- Plan carefully, Undo can only remove balls in reverse order (if you make a mistake early you might have to Undo a lot of struts)
- Never forget to have fun!
